Integrated Systems

Vanderbilt University  
Nashville, Tennessee, USA

# Learning Objectives in this Part of the Lesson

- Understand advanced features of completable futures, e.g.
  - Factory methods initiate async computations
  - Completion stage methods chain together actions to perform async result processing & composition
  - Arbitrary-arity methods that process futures in bulk

---

# Arbitrary-Arity Methods Process Futures in Bulk

# Arbitrary-Arity Methods Process Futures in Bulk

- Arbitrary-arity methods return futures that are triggered after completion of any/all futures

Methods	Params	Returns	Behavior
allOf	Varargs	CompletableFuture<Void>	Return a future that completes when all futures in params complete
anyOf	Varargs	CompletableFuture<Void>	Return a future that completes when any future in params complete

See [en.wikipedia.org/wiki/Arity](https://en.wikipedia.org/wiki/Arity)

# Arbitrary-Arity Methods Process Futures in Bulk

- Arbitrary-arity methods return futures that are triggered after completion of any/all futures
  - The returned future can be used to wait for any or all of  $N$  completable futures in an array to complete

«Java Class»

**CompletableFuture<T>**

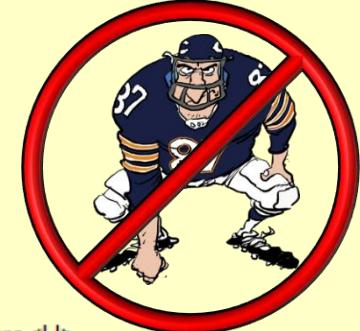

- `CompletableFuture()`
- `cancel(boolean):boolean`
- `isCancelled():boolean`
- `isDone():boolean`
- `get()`
- `get(long,TimeUnit)`
- `join()`
- `complete(T):boolean`
- `supplyAsync(Supplier<U>):CompletableFuture<U>`
- `supplyAsync(Supplier<U>,Executor):CompletableFuture<U>`
- `runAsync(Runnable):CompletableFuture<Void>`
- `runAsync(Runnable,Executor):CompletableFuture<Void>`
- `completedFuture(U):CompletableFuture<U>`
- `thenApply(Function<?>):CompletableFuture<U>`
- `thenAccept(Consumer<? super T>):CompletableFuture<Void>`
- `thenCombine(CompletionStage<? extends U>,BiFunction<?>):CompletableFuture<V>`
- `thenCompose(Function<?>):CompletableFuture<U>`
- `whenComplete(BiConsumer<?>):CompletableFuture<T>`
- `allOf(CompletableFuture[]<?>):CompletableFuture<Void>`
- `anyOf(CompletableFuture[]<?>):CompletableFuture<Object>`

# Arbitrary-Arity Methods Process Futures in Bulk

- Arbitrary-arity methods return futures that are triggered after completion of any/all futures
  - The returned future can be used to wait for any or all of  $N$  completable futures in an array to complete
  - This “wait” usually doesn’t block, but instead uses completion stage methods

<<Java Class>>

**CompletableFuture<T>**

- `CompletableFuture()`
- `cancel(boolean):boolean`
- `isCancelled():boolean`
- `isDone():boolean`
- `get()`
- `get(long,TimeUnit)`
- `join()`
- `complete(T):boolean`
- `supplyAsync(Supplier<U>):CompletableFuture<U>`
- `supplyAsync(Supplier<U>,Executor):CompletableFuture<U>`
- `runAsync(Runnable):CompletableFuture<Void>`
- `runAsync(Runnable,Executor):CompletableFuture<Void>`
- `completedFuture(U):CompletableFuture<U>`
- `thenApply(Function<?>):CompletableFuture<U>`
- `thenAccept(Consumer<? super T>):CompletableFuture<Void>`
- `thenCombine(CompletionStage<? extends U>,BiFunction<?>):CompletableFuture<V>`
- `thenCompose(Function<?>):CompletableFuture<U>`
- `whenComplete(BiConsumer<?>):CompletableFuture<T>`
- `allOf(CompletableFuture[]<?>):CompletableFuture<Void>`
- `anyOf(CompletableFuture[]<?>):CompletableFuture<Object>`

Help make programs more *responsive* by not blocking caller code

# Arbitrary-Arity Methods Process Futures in Bulk

- Arbitrary-arity methods return futures that are triggered after completion of any/all futures
  - The returned future can be used to wait for any or all of  $N$  completable futures in an array to complete
  - We focus on `allOf()`, which is like `thenCombine()` on steroids!

«Java Class»

**CompletableFuture<T>**

- `CompletableFuture()`
- `cancel(boolean):boolean`
- `isCancelled():boolean`
- `isDone():boolean`
- `get()`
- `get(long,TimeUnit)`
- `join()`
- `complete(T):boolean`
- `supplyAsync(Supplier<U>):CompletableFuture<U>`
- `supplyAsync(Supplier<U>,Executor):CompletableFuture<U>`
- `runAsync(Runnable):CompletableFuture<Void>`
- `runAsync(Runnable,Executor):CompletableFuture<Void>`
- `completedFuture(U):CompletableFuture<U>`
- `thenApply(Function<?>):CompletableFuture<U>`
- `thenAccept(Consumer<? super T>):CompletableFuture<Void>`
- `thenCombine(CompletionStage<? extends U>,BiFunction<?>):CompletableFuture<V>`
- `thenCompose(Function<?>):CompletableFuture<U>`
- `whenComplete(BiConsumer<?>):CompletableFuture<T>`
- **`allOf(CompletableFuture[]<?>):CompletableFuture<Void>`**
- `anyOf(CompletableFuture[]<?>):CompletableFuture<Object>`

# Arbitrary-Arity Methods Process Futures in Bulk

- These arbitrary-arity methods are hard to program directly

<<Java Class>>

## CompletableFuture<T>

```
CompletableFuture()
cancel(boolean):boolean
isCancelled():boolean
isDone():boolean
get()
get(long,TimeUnit)
join()
complete(T):boolean
supplyAsync(Supplier<U>):CompletableFuture<U>
supplyAsync(Supplier<U>,Executor):CompletableFuture<U>
runAsync(Runnable):CompletableFuture<Void>
runAsync(Runnable,Executor):CompletableFuture<Void>
completedFuture(U):CompletableFuture<U>
thenApply(Function<?>):CompletableFuture<U>
thenAccept(Consumer<? super T>):CompletableFuture<Void>
thenCombine(CompletionStage<? extends U>,BiFunction<?>):CompletableFuture<V>
thenCompose(Function<?>):CompletableFuture<U>
whenComplete(BiConsumer<?>):CompletableFuture<T>
allOf(CompletableFuture[]<?>):CompletableFuture<Void>
anyOf(CompletableFuture[]<?>):CompletableFuture<Object>
```

See [en.wikipedia.org/wiki/Gordian\\_Knot](https://en.wikipedia.org/wiki/Gordian_Knot)

# Arbitrary-Arity Methods Process Futures in Bulk

- These arbitrary-arity methods are hard to program directly
  - Instead, program them via wrappers

<<Java Class>>	
CompletableFuture<T>	
CompletableFuture()	
cancel(boolean):boolean	
isCancelled():boolean	
isDone():boolean	
get()	
get(long, TimeUnit)	
join()	
complete(T):boolean	
supplyAsync(Supplier<U>):CompletableFuture<U>	
supplyAsync(Supplier<U>, Executor):CompletableFuture<U>	
runAsync(Runnable):CompletableFuture<Void>	
runAsync(Runnable, Executor):CompletableFuture<Void>	
completedFuture(U):CompletableFuture<U>	
thenApply(Function<?>):CompletableFuture<U>	
thenAccept(Consumer<? super T>):CompletableFuture<Void>	
thenCombine(CompletionStage<? extends U>, BiFunction<?>):CompletableFuture<V>	
thenCompose(Function<?>):CompletableFuture<U>	
whenComplete(BiConsumer<?>):CompletableFuture<T>	
allOf(CompletableFuture[]<?>):CompletableFuture<Void>	
anyOf(CompletableFuture[]<?>):CompletableFuture<Object>
