# Learning Objectives in this Part of the Lesson

---

- Understand the design of the FileCounter case study
- Walkthrough the program implementation
  - Main driver & associated helper classes
  - FileCounterForkJoinTask
  - FileCounterSequentialStreamTask
    - Applies Java sequential streams & the Java fork-join framework

```
var forks = Stream
    .of(mFile.listFiles())
    .map(new
        FileCounterSequentialStreamTask
        (file,
         mDocumentCount,
         mFolderCount).fork());
    .toList();

return forks
    .stream()
    .mapToLong(ForkJoinTask::join)
    .sum();
```

---

# Walkthrough of the FileCounterSequential StreamTask

# Walkthrough of the FileCounterSequentialStreamTask

The screenshot shows an IDE interface with the following details:

- Title Bar:** ForkJoin – FileCounterForkJoinTask.java [ForkJoin.main]
- Toolbar:** Includes icons for Git, Run, TODO, Problems, Terminal, Profiler, CodeWhisperer Reference Log, Services, Build, Dependencies, App Inspection, and Logcat.
- Left Sidebar:** Project, Commit, Pull Requests, Structure, Bookmarks, AWS Toolkit, and External Libraries.
- Central Area:** Shows the file structure and code for `FileCounterForkJoinTask.java`. The code implements the `AbstractFileCounter` and uses the Java fork-join framework.

```
11 * This task uses the Java fork-join framework and Java 7 features to
12 * compute the size in bytes of a given file, as well as all the files
13 * in folders reachable from this file.
14 */
15 public class FileCounterForkJoinTask
16     extends AbstractFileCounter {
17     /**
18      * Constructor initializes the fields.
19     */
20     public FileCounterForkJoinTask(File file) { super(file); }
21
22     /**
23      * Constructor initializes the fields (used internally).
24     */
25     private FileCounterForkJoinTask(File file,
26                                     AtomicLong documentCount,
27                                     AtomicLong folderCount) {
28
29 }
```

- Bottom Status Bar:** Shows "daemon started successfully (yesterday 8:46 PM)", "AWS: No credentials selected", "CodeWhisperer", "Git: ✓ ✓ ✓", and other system information.
