# Learning Objectives in this Part of the Lesson

- Understand Java's structured concurrency model
- Recognize the classes used to program Java's structure concurrency model
- Evaluate the design & performance of various Java concurrency models
- Learn how StructuredTaskScope is implemented
  - Focus on StructuredTaskScope

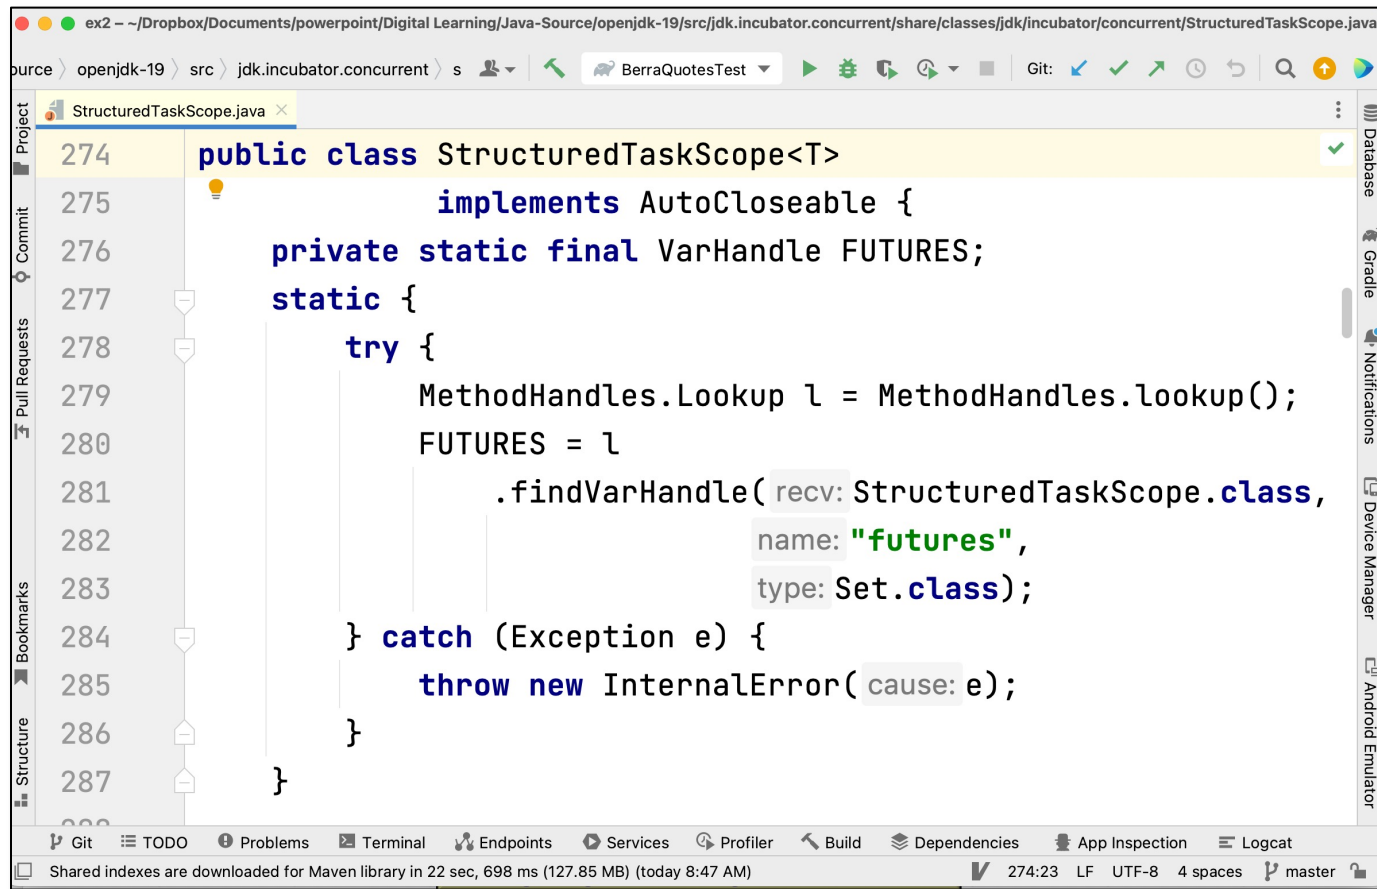

```
public class StructuredTaskScope<T>
    implements AutoCloseable {
    private static final VarHandle FUTURES;
    static {
        try {
            MethodHandles.Lookup l = MethodHandles.lookup();
            FUTURES = l
                .findVarHandle(recv: StructuredTaskScope.class,
                               name: "futures",
                               type: Set.class);
        } catch (Exception e) {
            throw new InternalError(cause: e);
        }
    }

    private final ThreadFactory factory;
    private final ThreadFlock flock;
    private final ReentrantLock shutdownLock =
        new ReentrantLock();
```

---

# Walkthrough of the Java StructuredTaskScope Code

# Walkthrough of the Java StructuredTaskScope Code

```
274 public class StructuredTaskScope<T>
275     implements AutoCloseable {
276     private static final VarHandle FUTURES;
277     static {
278         try {
279             MethodHandles.Lookup l = MethodHandles.lookup();
280             FUTURES = l
281                 .findVarHandle(recv: StructuredTaskScope.class,
282                               name: "futures",
283                               type: Set.class);
284         } catch (Exception e) {
285             throw new InternalError(cause: e);
286         }
287     }
```
