Professor of Computer Science

**Institute for Software
Integrated Systems**

**Vanderbilt University
Nashville, Tennessee, USA**

Learning Objectives in this Part of the Lesson

- Understand the purpose the Java executor framework
- Know the types of thread pools supported by the framework
- Recognize a human known use of thread pools
- Learn the key interfaces the framework provides
- Be aware of the factory methods provided by the Java Executors class

<<Java Class>>	
G Executors	
S	newFixedThreadPool(int):ExecutorService
S	newWorkStealingPool(int):ExecutorService
S	newWorkStealingPool():ExecutorService
S	newFixedThreadPool(int,ThreadFactory):ExecutorService
S	newSingleThreadExecutor():ExecutorService
S	newSingleThreadExecutor(ThreadFactory):ExecutorService
S	newCachedThreadPool():ExecutorService
S	newCachedThreadPool(ThreadFactory):ExecutorService
S	newSingleThreadScheduledExecutor():ScheduledExecutorService
S	newSingleThreadScheduledExecutor(ThreadFactory):ScheduledExecutorService
S	newScheduledThreadPool(int):ScheduledExecutorService
S	newScheduledThreadPool(int,ThreadFactory):ScheduledExecutorService
S	defaultThreadFactory()
S	privilegedThreadFactory()
S	callable(Runnable,T):Callable<T>
S	callable(Runnable):Callable<Object>
S	callable(PrivilegedAction<?>):Callable<Object>
S	callable(PrivilegedExceptionAction<?>):Callable<Object>
S	privilegedCallable(Callable<T>):Callable<T>
S	privilegedCallableUsingCurrentClassLoader(Callable<T>):Callable<T>

The Java Executors Class

The Java Executors Class

- Executors is a utility class that creates executor implementations

<<Java Class>>	
Executors	
	<code>newFixedThreadPool(int):ExecutorService</code>
	<code>newWorkStealingPool(int):ExecutorService</code>
	<code>newWorkStealingPool():ExecutorService</code>
	<code>newFixedThreadPool(int,ThreadFactory):ExecutorService</code>
	<code>newSingleThreadExecutor():ExecutorService</code>
	<code>newSingleThreadExecutor(ThreadFactory):ExecutorService</code>
	<code>newCachedThreadPool():ExecutorService</code>
	<code>newCachedThreadPool(ThreadFactory):ExecutorService</code>
	<code>newSingleThreadScheduledExecutor():ScheduledExecutorService</code>
	<code>newSingleThreadScheduledExecutor(ThreadFactory):ScheduledExecutorService</code>
	<code>newScheduledThreadPool(int):ScheduledExecutorService</code>
	<code>newScheduledThreadPool(int,ThreadFactory):ScheduledExecutorService</code>
	<code>defaultThreadFactory()</code>
	<code>privilegedThreadFactory()</code>
	<code>callable(Runnable,T):Callable<T></code>
	<code>callable(Runnable):Callable<Object></code>
	<code>callable(PrivilegedAction<?>):Callable<Object></code>
	<code>callable(PrivilegedExceptionAction<?>):Callable<Object></code>
	<code>privilegedCallable(Callable<T>):Callable<T></code>
	<code>privilegedCallableUsingCurrentClassLoader(Callable<T>):Callable<T></code>

See docs.oracle.com/javase/8/docs/api/java/util/concurrent/Executors.html

The Java Executors Class

- Executors is a utility class that creates executor implementations
- A utility class is a final class having only static methods, no state, & a private constructor

<<Java Class>>	
Executors	
	<code>newFixedThreadPool(int):ExecutorService</code>
	<code>newWorkStealingPool(int):ExecutorService</code>
	<code>newWorkStealingPool():ExecutorService</code>
	<code>newFixedThreadPool(int,ThreadFactory):ExecutorService</code>
	<code>newSingleThreadExecutor():ExecutorService</code>
	<code>newSingleThreadExecutor(ThreadFactory):ExecutorService</code>
	<code>newCachedThreadPool():ExecutorService</code>
	<code>newCachedThreadPool(ThreadFactory):ExecutorService</code>
	<code>newSingleThreadScheduledExecutor():ScheduledExecutorService</code>
	<code>newSingleThreadScheduledExecutor(ThreadFactory):ScheduledExecutorService</code>
	<code>newScheduledThreadPool(int):ScheduledExecutorService</code>
	<code>newScheduledThreadPool(int,ThreadFactory):ScheduledExecutorService</code>
	<code>defaultThreadFactory()</code>
	<code>privilegedThreadFactory()</code>
	<code>callable(Runnable,T):Callable<T></code>
	<code>callable(Runnable):Callable<Object></code>
	<code>callable(PrivilegedAction<?>):Callable<Object></code>
	<code>callable(PrivilegedExceptionAction<?>):Callable<Object></code>
	<code>privilegedCallable(Callable<T>):Callable<T></code>
	<code>privilegedCallableUsingCurrentClassLoader(Callable<T>):Callable<T></code>

See www.quora.com/What-is-the-best-way-to-write-utility-classes-in-Java/answer/Jon-Harley

The Java Executors Class

- Executors is a utility class that creates executor implementations
 - A utility class is a final class having only static methods, no state, & a private constructor
- Factory methods create desired executors

<<Java Class>>	
Executors	
	<code>newFixedThreadPool(int):ExecutorService</code>
	<code>newWorkStealingPool(int):ExecutorService</code>
	<code>newWorkStealingPool():ExecutorService</code>
	<code>newFixedThreadPool(int,ThreadFactory):ExecutorService</code>
	<code>newSingleThreadExecutor():ExecutorService</code>
	<code>newSingleThreadExecutor(ThreadFactory):ExecutorService</code>
	<code>newCachedThreadPool():ExecutorService</code>
	<code>newCachedThreadPool(ThreadFactory):ExecutorService</code>
	<code>newSingleThreadScheduledExecutor():ScheduledExecutorService</code>
	<code>newSingleThreadScheduledExecutor(ThreadFactory):ScheduledExecutorService</code>
	<code>newScheduledThreadPool(int):ScheduledExecutorService</code>
	<code>newScheduledThreadPool(int,ThreadFactory):ScheduledExecutorService</code>
	<code>defaultThreadFactory()</code>
	<code>privilegedThreadFactory()</code>
	<code>callable(Runnable,T):Callable<T></code>
	<code>callable(Runnable):Callable<Object></code>
	<code>callable(PrivilegedAction<?>):Callable<Object></code>
	<code>callable(PrivilegedExceptionAction<?>):Callable<Object></code>
	<code>privilegedCallable(Callable<T>):Callable<T></code>
	<code>privilegedCallableUsingCurrentClassLoader(Callable<T>):Callable<T></code>

See en.wikipedia.org/wiki/Factory_method_pattern

The Java Executors Class

- Executors is a utility class that creates executor implementations
 - A utility class is a final class having only static methods, no state, & a private constructor
- Factory methods create desired executors

A pool of worker threads

e.g., cached, fixed, work-stealing thread pools, etc.

<<Java Class>>

Executors

```
newFixedThreadPool(int):ExecutorService
newWorkStealingPool(int):ExecutorService
newWorkStealingPool():ExecutorService
newFixedThreadPool(int,ThreadFactory):ExecutorService
newSingleThreadExecutor():ExecutorService
newSingleThreadExecutor(ThreadFactory):ExecutorService
newCachedThreadPool():ExecutorService
newCachedThreadPool(ThreadFactory):ExecutorService
newSingleThreadScheduledExecutor():ScheduledExecutorService
newSingleThreadScheduledExecutor(ThreadFactory):ScheduledExecutorService
newScheduledThreadPool(int):ScheduledExecutorService
newScheduledThreadPool(int,ThreadFactory):ScheduledExecutorService
defaultThreadFactory()
privilegedThreadFactory()
callable(Runnable,T):Callable<T>
callable(Runnable):Callable<Object>
callable(PrivilegedAction<?>):Callable<Object>
callable(PrivilegedExceptionAction<?>):Callable<Object>
privilegedCallable(Callable<T>):Callable<T>
privilegedCallableUsingCurrentClassLoader(Callable<T>):Callable<T>
```

The Java Executors Class

- Executors is a utility class that creates executor implementations
 - A utility class is a final class having only static methods, no state, & a private constructor
 - Factory methods create desired executors
 - ThreadFactory creates new threads

<<Java Class>>	
Executors	
newFixedThreadPool(int):ExecutorService	
newWorkStealingPool(int):ExecutorService	
newWorkStealingPool():ExecutorService	
newFixedThreadPool(int,ThreadFactory):ExecutorService	
newSingleThreadExecutor():ExecutorService	
newSingleThreadExecutor(ThreadFactory):ExecutorService	
newCachedThreadPool():ExecutorService	
newCachedThreadPool(ThreadFactory):ExecutorService	
newSingleThreadScheduledExecutor():ScheduledExecutorService	
newSingleThreadScheduledExecutor(ThreadFactory):ScheduledExecutorService	
newScheduledThreadPool(int):ScheduledExecutorService	
newScheduledThreadPool(int,ThreadFactory):ScheduledExecutorService	
defaultThreadFactory()	
privilegedThreadFactory()	
callable(Runnable,T):Callable<T>	
callable(Runnable):Callable<Object>	
callable(PrivilegedAction<?>):Callable<Object>	
callable(PrivilegedExceptionAction<?>):Callable<Object>	
privilegedCallable(Callable<T>):Callable<T>	
privilegedCallableUsingCurrentClassLoader(Callable<T>):Callable<T>	

See docs.oracle.com/javase/8/docs/api/java/util/concurrent/ThreadFactory.html

The Java Executors Class

- Executors is a utility class that creates executor implementations
 - A utility class is a final class having only static methods, no state, & a private constructor
 - Factory methods create desired executors
- ThreadFactory creates new threads

There's a default thread factory
